

VINNER HOODA

Software Engineer | Full-Stack Developer

Delhi NCR | vinner.uk | vinnerhooda@gmail.com | linkedin.com/in/vinnerhooda | github.com/Conceal34 | +91-99926-46223

PROFESSIONAL SUMMARY

Full-Stack Software engineer skilled in developing Cloud-native and AI driven solutions using React/Next.js, Node.js, Python and AWS, with experience handling complete lifecycle including system design requirements, REST API development, data modeling and deploying ready-to-scale systems via Github Actions CI/CD pipelines.

CORE COMPETENCIES

Languages & Frameworks: JavaScript (JS), TypeScript (TS), Tailwind CSS, Python, React.js, Node.js, Express.js, Next.js

Backend, APIs & Data: REST API Design, Microservices, JWT, MySQL, PostgreSQL, MongoDB, Prisma ORM, OAuth 2.0

DevOps & Cloud: Git, Linux, Docker, GitHub Actions CI/CD, AWS (EC2, Lambda, S3, ECS, RDS, DynamoDB), Nginx

PROFESSIONAL EXPERIENCE

Software Engineer Intern | Jobiffi

May 2026 - Jul 2026

- Engineered live REST endpoints (GET /api/jobs/:id) to replace legacy demo data, ensuring real-time synchronized data delivery for job listings.
- Engineered a Bookmarks module and flow also developed an Applied Jobs Dashboard featuring a hiring-pipeline stepper.
- Built a secure application withdrawal flow (DELETE endpoint with status/candidacy checks)
- Debugging:** Resolved a critical multi-redirect authentication loop; collaborated with the backend team on database schema and pagination issues.

Front-End Developer | Freelance

Jan 2022 - Present

- Optimized several clients apps for performance, improving load times and Lighthouse scores noticeably across projects.
- Worked directly with clients to scope requirements and build responsive React apps, accessibility-conscious interfaces, usually in short iterative cycles.

KEY PROJECTS

Agentic CloudOps (k8s.vinner.uk)

Sep 2026 | *Python, FastAPI, LangGraph, Google Gemini, React, TypeScript, scikit-learn*

- Built an autonomous site-reliability system that detects anomalies in microservices using an Isolation Forest model and resolves them through a langchain and lang-graph multi-agent LLM pipeline (diagnosis, remediation, critic agents) with a human-in-the-loop approval gate.
- Added a React dashboard for live monitoring, agent reasoning showcase, human-approval or edit actions layer with a fault-injection tool to simulate incidents for showcase.

Ascend Fitness (gym.vinner.uk)

April 2026 | *Next.js, Node.js, PostgreSQL, Google Calendar API, OAuth 2.0*

- Built a gym management SAAS platform with 3-role (admin, trainer, member) RBAC using RLS, tracking 12+ gym and nutrition KPIs.
- Integrated Google Calendar with OAuth 2.0 for two-way session-booking sync on Google meet, removing manual scheduling.

Job Application Tracker

Jan 2026 | *Next.js 14, PostgreSQL, Docker, AWS EC2, GitHub Actions CI/CD*

- Built a SaaS with Docker multi-stage builds and a GitHub Actions CI/CD pipeline that reduced deployment time significantly. With containers hosted on DockerHub.
- Engineered REST API alongside a React based analytics dashboard for the applications lifecycle; utilized PostgreSQL for data storage and redis for caching needs.

Automated License Plate Recognition

Jan 2025 | *Python, YOLOv5, PaddleOCR, OpenCV*

- Built a YOLOv5 + PaddleOCR vehicle-detection pipeline reaching 80% recognition accuracy across 500+ test images, with throughput improved through preprocessing optimization.
- Integrated SORT multi-object tracking to keep plate identities consistent across frames and added pandas-based interpolation to fill missed detections in frames of video, then exported frame-level CSV logs of plate text, confidence scores and bounding boxes.
- Developed a Tkinter desktop dashboard so non-technical users can run the pipeline and view annotated output video, photo or live feed from a camera.

RESEARCH & PUBLICATIONS

"Satellite-Based Flood Detection Using Deep Learning and Probabilistic Mapping"

IEEE C12A-2026 | Apr 2026

- Trained a U-Net CNN on Sentinel-1 SAR (Synthetic aperture radar) imagery achieving 83% recall and built a probabilistic mapping algorithm to classify affected areas into risk zones for disaster-response planning.

EDUCATION

Master of Computer Applications (MCA) | Christ University, Delhi NCR

2025 - May 2027 (Expected)

Bachelor of Computer Applications (BCA) | Chandigarh University

2022 - Jul 2025

LEADERSHIP & VOLUNTEER

- Event Manager, UpEntertainment & Productions:** Managed logistics for the Darshan Raval India Tour (7,500+ attendees, multiple cities).
- NSS Coordinator, Chandigarh University:** Organized 13+ blood donation camps, 2 medical camps, and 8+ cleanliness drives.
