

VINNER HOODA

Software Engineer | Full-Stack Developer

vinnerhooda@gmail.com | linkedin.com/in/vinnerhooda | github.com/Conceal34 | vinner-portfolio.netlify.app | +91-99926-46223

PROFESSIONAL SUMMARY

Full-stack Software Engineer with experience building scalable REST APIs, React/Node.js applications, and cloud-native systems on AWS. Proven track record delivering resilient, production-grade solutions across the full SDLC - from solution design and data modeling to CI/CD deployment and performance tuning. IEEE-published deep learning researcher (CI2A-2026). Skilled in Agile/Scrum, cross-functional stakeholder collaboration, and secure coding practices.

CORE COMPETENCIES

Languages & Frameworks: JavaScript, TypeScript, Python, C++, Java, HTML5, CSS3, React.js, Next.js, Node.js, Express.js, Tailwind CSS

Backend, APIs & Data: REST API Design, Microservices Architecture, System Design, Data Modeling, MongoDB, PostgreSQL, SQL, Prisma ORM, OAuth 2.0, NextAuth, Secure Coding Practices

DevOps & Cloud: Docker, Kubernetes, GitHub Actions CI/CD, AWS (EC2, Lambda, S3, CloudWatch), Cloud-Native Architecture, Observability & Monitoring, High Availability, Git, Linux, Nginx

Engineering Practices: Agile/Scrum, SDLC, Data Structures & Algorithms, OOP, SOLID Principles, Performance Tuning, Unit & Integration Testing, Technical Documentation, Stakeholder Management

PROFESSIONAL EXPERIENCE

Software Engineer Intern | Jobiffi

May 2026 – Jul 2026

- Engineered a scalable Job Detail module using React Router and data modeling for 6+ fields, migrating mock pages to live production REST APIs (GET /api/jobs, /api/jobs/:id) to enhance data freshness.
- Designed and developed an interactive Bookmarks (Saved Jobs) module and an Applied Jobs Dashboard with a visual hiring pipeline stepper, resolving critical authentication loops and candidate redirection defects.
- Built a secure application withdrawal mechanism (DELETE API with strict status validation and candidacy checks), successfully reducing backend database drift and improving user agency.
- Spearheaded cross-functional debugging with the backend team, resolving database schema mismatches and pagination defects while implementing logo fallback systems, search routing, and custom 404 error boundaries.

Front-End Developer | Freelance

Jan 2021 – Oct 2023

- Optimized 5 client React/Tailwind applications via performance tuning and secure coding practices, raising average Lighthouse scores 68 to 92 and cutting load time 31% (4.2s to 2.9s) - driving a 16% lift in 30-day retention.
- Collaborated with stakeholders to gather requirements, define scope, and deliver responsive, accessibility-compliant interfaces aligned to Agile-style iterative workflows across multiple client projects.

KEY PROJECTS

Job Application Tracker SaaS | Next.js 14, Node.js, PostgreSQL, Docker, AWS EC2, GitHub Actions CI/CD

- Architected a cloud-native, microservices-based SaaS with Docker multi-stage builds and an automated CI/CD pipeline, cutting AWS EC2 deployment time 94% (45 min to 3–5 min) with production-grade observability and high availability.
- Designed a resilient REST API with 12+ endpoints for lifecycle tracking (applied → interview → offer), backed by optimized PostgreSQL queries with data modeling best practices and a real-time analytics dashboard.

Ascend Fitness – Gym Management SaaS | Next.js, Node.js, PostgreSQL, Google Calendar API, OAuth 2.0, NextAuth

- Built a scalable multi-tenant platform with RBAC for 3 user roles (admin, trainer, member), tracking 12+ KPIs across memberships and nutrition; deployed to production on AWS EC2 with secure API endpoints.
- Integrated Google Calendar API with OAuth 2.0 for automated 2-way session-booking sync, eliminating manual scheduling overhead for staff and members.

Automated License Plate Recognition | Python, YOLOv5, PaddleOCR, OpenCV

- Built a YOLOv5 + PaddleOCR vehicle-detection pipeline reaching 80% recognition accuracy across 500+ test images; improved throughput 20% (2.5→3 FPS) via preprocessing optimization and unit testing.

RESEARCH & PUBLICATIONS

"Satellite-Based Flood Detection Using Deep Learning and Probabilistic Mapping" (<https://ieeexplore.ieee.org/document/11577034>) |

IEEE CI2A-2026 | Apr 2026

- Trained a U-Net CNN on Sentinel-1 SAR imagery achieving 83% recall; built probabilistic mapping algorithm classifying 1,200+ sq km into 3 risk zones for disaster-response resource allocation.

EDUCATION

Master of Computer Applications (MCA) | Christ University, Delhi NCR

May 2027(Expected)

Bachelor of Computer Applications (BCA) | Chandigarh University

Jul 2025

LEADERSHIP & VOLUNTEER

- Event Manager, UpEntertainment & Productions — Managed end-to-end logistics for the Darshan Raval India Tour across 7,500+ attendees and multiple cities; led cross-functional vendor and team coordination.
- NSS Coordinator, Chandigarh University — Organized 13+ blood donation camps, 2 medical camps, and 8+ cleanliness drives; led volunteer teams delivering each initiative on schedule.
